Statement by Usher L. Burdidk

## FREEZING INDIANS SHOULD GET GARRISON COAL

A short time ago it was brought to my attention that white is being dond, or apparently, ideded is is planned to be done with any of the huge mountains of lignite coal being excavated from the Garrison dam ARCA in North Dakota. I wrote John B. Hart, executive director of the North Dakota Indian affairs commission, SUGGESting that transportation be arranged to convey the coal would be very useful in hundreds of Indian homes, on reservations in my state, where, during past severe winters Indians in some instances have been forced to burn even their furniture to keep warm. With all the coal at the Garrison dam, k it seems criminal to me that such a situation should exist.

Mr. Hart was at once enthusiastic and has cooperated with me to the fullest extent in trying to obtain a release on this coal. The Indian Bureau at first protested that the coal stockpiled/kk the damsite is of very poor quality, unsuitable for burning in cook-stoves or heating stoves in it's native condition. I now hold a letter, however, Rich signed by Colonel F.M. Albrecht, chief engineer of the Garrison District in which he states that the coal is being used regularly, in considerable quantities at the central heating kkakk and power plant at Riverdale. Colonel Albrecht states that he would need specific authority to transfer some of the coal stockpile to the Indian service, but that he believes "such authority would be redily forthcoming upon request." Basis for transfer, says Albrecht, has been reimbursement of the actual cost to his office of the materials as they are salvaged and store in stockpiles, plus the cost of any handling, processing and transportation performed by the Army Engineers for the agency obtaining the coal.

According tog the army engineer's own figures the cost of the lignite as it stands in the stockpides is 32 cents per ton. Loaded on rail cars or trucks, without processing, the cost is 54 cents per ton. The army engineers offer see to run the un processed coal through what is called a primary crusher, reducing the maximum size of the lumps to about five inches, for only 44 cents more, by or a total of only 98 cents per ton.

I believe this coal question is going to be worked out, and I'm going to keep after everybody concerned until something definite is worked out. The coal might have/objectionable oders, the engineers warn. I hardly think a the family of warm and comfortable Indians will make much of an objection to a small oder from the coal, while a North Dakota blizzard rages outside. When is I first is brought up the subject of utilizing this coal, the Indian Bureau people said, "Oh, those terrible lignite fumes will asphymiate someone." Well, any kind of heating is bad if you don't allow a means of ventilation. Any kind of is fuel burning stove will burn up oxygen and our Indian population knows that just as certainly as do the rest of us.

The coal can be obtained reactively at a very reasonable cost. it can be stockpiled on our various reservations at a central point where the Indians could obtain *it* and transport it with their own means. Or, it could be distributed to our indigent Indians upon application to their reservation superintentent.

G.Warren Spaulding, areas director of the Bureau of Indian Affairs, advises me that he has kickets dispatched a man whick to inspect the coal and kickets with the bas kickets dispatched a man whick to inspect the coal Service Equipment within an economical distribution." I hepe Mr. Spaulding I will be interested to know what he finds into out, and also what he considers "Indian Service Equipment" and and "economical distribution area." Spaulding's inspector, I hope, will furnish the Army engineers with an estimated quantity of the coal kateria needed. The army engineers say they will not be able to request higher authority to transfer the coal kate until such an estimate is made.

I see this as a splendid opportunity for the Indian Burea to to look the barn door before the horse is out---for once!! use a little foresight---for once!!!
